

SupportMitra Local Development Startup Guide

This guide explains how to start your SupportMitra project every time. Your project has:

- Backend → Django server
- Frontend → React + Vite server

Project Structure

```
fridaySystems_Tech/  
├──  
│   ├── backend/  
│   ├── frontend/  
│   └── .venv/
```

STEP 1 — Open VS Code

Open your fridaySystems_Tech project folder in VS Code.

STEP 2 — Start Backend

```
Open Terminal #1:  
  
cd ~/Documents/fridaySystems_Tech/backend  
  
source ../.venv/bin/activate  
  
python3 manage.py runserver
```

If successful, Django will start at <http://127.0.0.1:8000/>

STEP 3 — Start Frontend

```
Open Terminal #2:  
  
cd ~/Documents/fridaySystems_Tech/frontend  
  
npm run dev
```

Frontend will usually run at <http://localhost:5173/>

STEP 4 — Open Website

```
Open in browser:  
  
http://localhost:5173
```

Django Admin Panel

Admin URL:

`http://127.0.0.1:8000/admin/`

Important Notes

Thing	What to do
Backend terminal	Keep it running while working
Frontend terminal	Keep it running while working
Backend first	Always start backend before frontend
Virtual environment	Activate only for backend

Common Errors

1. Port already in use
→ Press CTRL + C in old terminal
2. ModuleNotFoundError
→ `pip install <package-name>`
3. Blank frontend
→ Make sure backend is running
4. Django admin login issue
→ Run:
`python3 manage.py createsuperuser`

Daily Startup Checklist

- ✓ Open VS Code
- ✓ Start backend
- ✓ Start frontend
- ✓ Open `localhost:5173`
- ✓ Begin development
